PROFESSIONAL SUMMARY

Senior Backend Engineer with 4.5+ years of experience designing and scaling distributed, event-driven microservices for high-volume fintech platforms. Delivered 82% API latency reduction, remediated 100+ critical security vulnerabilities, and achieved SOC 2/GDPR compliance across production systems serving Credit Karma, LendingTree, and Even Financial. Deep expertise in Java/Spring Boot, AWS (Lambda, ECS, Secrets Manager), Redis, and MySQL. Currently engineering autonomous multi-agent AI systems — bringing modern LLM orchestration and agentic architecture skills to backend engineering challenges.

TECHNICAL SKILLS

Languages: Java (Expert), Python, SQL, TypeScript

Backend Frameworks: Spring Boot 3.x, Spring Security, Spring MVC, Microservices, REST APIs

Cloud & DevOps: AWS (Lambda, ECS, Secrets Manager, S3, DynamoDB), Docker, Jenkins, CI/CD, SonarQube, Nexus

Data & Caching: MySQL, PostgreSQL, Redis, Liquibase, DynamoDB

Architecture: Distributed Systems, Event-Driven Architecture, State Machine Design, Concurrency / Thread Pooling

Security & Compliance: Spring Security, Encryption/Hashing, GDPR, SOC 2, DevSecOps

Testing & Observability: JMeter (1000+ concurrent requests), Unit Testing, Load Testing

AI / Emerging: Google ADK, A2A Protocol, LLM Integration, Multi-Agent Orchestration, Memory Bank, Context Compaction

PROFESSIONAL EXPERIENCE

Independent AI & Backend Engineer | Self-Directed October 2025 – Present

Remote | Multi-Agent Systems | Full Stack | Google ADK | Python | A2A Protocol

- Reduced manual research time by **~70%** per task cycle by architecting a stateful multi-agent orchestration system (Google ADK, A2A Protocol, Python) with autonomous discovery, research synthesis, and drafting agents. GitHub: github.com/sakethbalijepalli/multi-agent-orchestration-adk
- Eliminated mid-task failure recovery delays to **under 2s** by engineering session management and crash-recovery layers — ensuring deterministic agent behavior across restarts in production-like conditions.
- Cut redundant context replay by **~60%** by implementing Memory Bank integration and LLM context compaction strategies across long-horizon autonomous task chains.
- Building SpaceBook India — a two-sided studio/rehearsal space booking marketplace (Next.js 14, Spring Boot 3.x, PostgreSQL/Supabase, Razorpay) targeting 4 Indian cities. GitHub: github.com/sakethbalijepalli/SpaceBook

Career Break — UPSC Civil Services Preparation | August 2024 – September 2025

Full-time preparation for India's national civil services examination — building systems-level thinking across governance, technology policy, economics, and public administration.

Senior Software Engineer | ADF Data Science Pvt. Ltd. May 2021 – July 2024

Remote | Fintech Platform Engineering | Partners: Credit Karma, LendingTree, Even Financial

- Slashed API latency by **82%** (45s → under 8s) by migrating monolithic sequential request handling to a thread-pooled concurrent microservices architecture using ExecutorService and CountDownLatch across high-volume financial data pipelines.
- Cut AWS Lambda execution latency from **500ms to under 10ms** by diagnosing and resolving Redis connection pool exhaustion and Lambda cold-start bottlenecks; validated stability under 1,000+ concurrent requests via JMeter.
- Remediated **100+** critical security vulnerabilities (SonarQube, Nexus) and achieved full GDPR and SOC 2 compliance by implementing custom Spring Security encryption and hashing across the platform.
- Contributed to **18%** increase in new customer signups by rebuilding underwriting decision workflows as a config-driven State Machine, eliminating deployment dependencies for business rule updates.

- Deployed production microservices on AWS ECS and integrated 3 major US fintech partners (Credit Karma, LendingTree, Even Financial) via RESTful APIs with Liquibase schema version control.

Java Developer · Contract | IntentBi

August 2020 – November 2020

Remote | Short-term contract | Analytics Platform

- Reduced frontend render latency by **~30%** by integrating 15+ third-party REST APIs (Facebook, Twitter, LinkedIn) into a real-time social analytics dashboard and optimizing API response payloads.

KEY PROJECTS

SpaceBook India — Two-sided hourly studio/rehearsal space booking marketplace. Stack: Next.js 14, Spring Boot 3.x microservices, PostgreSQL/Supabase, Razorpay. Architecting multi-city MVP across 4 Indian cities with availability engine, dual-role auth, and payment webhooks. github.com/sakethbalijepalli/SpaceBook

Multi-Agent Orchestration System — Autonomous multi-agent pipeline (Google ADK, A2A Protocol, Python) with stateful session management, crash recovery, Memory Bank integration, and custom tool pipelines. github.com/sakethbalijepalli/multi-agent-orchestration-adk-

EDUCATION & CERTIFICATIONS

AI Agents Intensive Certification | Google & Kaggle | 2025

B.Tech in Computer Science | Gitam University, Hyderabad
